

SMD-Luminosity Full Color LEDs 67-235-BJRQGCC-A01E-2T8-CS

Features

- . Colorless clear resin.
- . White SMT package.
- . Built in 3 LED chips.
- . Lead frame package with individual 6 pins.
- . Wide viewing angle.
- . Soldering methods: Reflow soldering.
- . High performance.
- . Pb-free.
- . The product itself will remain within RoHS compliant version.
- . Compliance with EU REACH.
- . Compliance Halogen Free .(Br <900 ppm ,Cl <900 ppm , Br+Cl < 1500 ppm).
- . Precondition: Bases on JEDEC J-STD 020D Level 3

Description

Due to the package design, 67-235 has wide viewing angle, low power consumption and high luminous intensity. This feature makes it ideal for light pipe or lighting application.

Applications

- . Amusement equipment.
- . Information boards.
- . Flashlight for digital camera of cellular phone.
- . Lighting for small size device.

Precautions for Use

1. Over-current-proof

- 1.1 Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

- 2.1 Moisture proof bag should only be opened immediately prior to usage.
 2.2 Environment should be less than 30°C and 60% RH when moisture proof bag is opened.
 2.3 After opening the package MSL Conditions stated on page 1 of this spec should not be exceeded.
 2.4 If the moisture sensitivity card indicates higher than acceptable moisture, the component should be baked at min. 60deg +/-5deg for 24 hours.

3. Soldering Condition

- 3.1 Pb-free solder temperature profile
 3.2 Reflow soldering should not be done more than two times.
 3.3 When soldering, do not put stress on the LEDs during heating.
 3.4 After soldering, do not warp the circuit board.

4. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

Application Restrictions

High reliability applications such as military/aerospace, automotive safety/security systems, and medical equipment may require different product. If you have any concerns, please contact Everlight before using this product in your application. This specification guarantees the quality and performance of the product as an individual component. Do not use this product beyond the specification described in this document.

DISCLAIMER

1. EVERLIGHT reserves the right(s) on the adjustment of product material mix for the specification.
2. The product meets EVERLIGHT published specification for a period of twelve (12) months from date of shipment.
3. The graphs shown in this datasheet are representing typical data only and do not show guaranteed values.
4. When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these specification sheets.
